

**Pinnacle** is the trading and investment platform that will become your primary point of access to the growing world of crypto, CFD, stocks, futures, and options investment. Pinnacle will be a full featured investment multiplex with truly automated trading features for beginners, and the very best trading tools for professionals. This platform will revolutionize trading cryptocurrency and world markets. Every single person can become a successful trader as long as they use the right tools and choose the trading style that fits their strengths and weaknesses.

Pinnacle Key Features include:

**Pinnacle will allow traders to perform all trading tasks on one single platform.** There are some websites and applications that will do some of the things that Pinnacle will do, but traders always end up having to login to multiple sites to get all of the functionality that they need. Pinnacle will be THE ONE application that traders need to perform all aspects of trading.

**The moment I hear a person list out 5-6 sites where you can get these services, they have made my point. Why depend on 5-6 sites, when you can use one with more functionality and reliability that any of the others put together.**

- **Access to every major trading exchange from the single Pinnacle platform and ability to execute all trading functions within the platform** (PC, Mac, Android and iOS). Pinnacle users will be able to add and control all trading functions on all crypto exchanges plus many CFD, forex, commodities, stocks, and futures exchanges. Pinnacle will also allow users to set many different orders for trade execution on their chosen exchanges. Many exchanges don't even have trailing stop loss orders. Pinnacle will solve that problem and allow for "uniform" trading options between all exchanges.

There are some websites and applications that have similar functions. But they do not include the massive number of exchanges that Pinnacle will support. There are currently no crypto based applications that allow a user to add API control of accounts with major forex, stock, bonds, futures, and options exchanges. Many exchanges lack a full set of trade orders. Many do not have trailing stops or other more specialized orders. Pinnacle will include every major order that the world markets employ.

- **Fully automated arbitrage trading within and between all exchanges.**

Users will be able to “set and forget” this module to perform arbitrage trades on individual exchanges, or many exchanges at once.

Pinnacle will also allow users to place arbitrage trades between separate exchanges. This module will operate as an automated trading bot, performing all functions from start to completion. This includes transferring coins between exchanges prior to the actual arbitrage trade. It can also be set to alert traders and allow them to execute the trading opportunities manually.

There are no other applications that can do this effectively up to now.

- **Copy/follow professional traders as they place trades across multiple platforms simultaneously** (with multi-month performance based qualification system and automated commissions).

Users will be able to copy pro traders while they trade across multiple exchanges simultaneously. This will include non-crypto exchanges that allow stock, bonds, and futures trading. Pinnacle will automatically execute the exact same trade for each user and deduct trading commission in BRIL. Pinnacle will track traders over the

course of their history and provide a non-biased certification rating that users can refer to and know what to expect when copying.

There are a few exchanges that offer a similar function. The difference between Pinnacle and the competition is the ability to copy trades between dozens of separate exchanges. Most websites that offer a rating feature, allow for members to rate them at whatever level they choose. This allows for “friends” to artificially boost a traders performance rating. Pinnacle will make arbitrary ratings based on actual trading performance over time.

- **YamaCat Trading Course For Beginners** to learn all skills necessary to be a competent trader in real time. YamaCat will interactively lead beginners through basics and intermediate skills to help them become profitable traders. Users can follow the step by step instructional course, or use YamaCat any time they want to make a trade. It will assist users to know whether they should or should not get into their chosen market. This feature will be very helpful for all traders who want a second opinion before they place a trade.

There are no crypto sites or exchanges that currently have this feature. There are some sites that teach stocks/bonds/futures trading, but the course are usually very expensive. The only other options out there require that a person pay a lump sum or monthly fee to attend online courses and be taught by a person at specific times. With the YamaCat Trading Course, users can learn anytime that choose, day or night, and continue using it for as long they feel the need.

- **Extensive charting app for all exchanges with advanced AI trade pattern recognition/identification, automated trade execution, and trade setup alerts for professionals.** This module will actively search your charts for technical analysis market patterns in both standard

form and candlestick patterns. When a pattern is found, the chart will highlight the pattern and include projected price movements to plan your trades. This will be a visual drawing on the chart along with an alert box with information about the pattern and what tends to happen when it appears. Pinnacle will allow users to set this module to automatically execute trades on its own based on trading patterns, or display the patterns for traders to manually execute their trades. Charting app will include all major indicators and tools to be used on their charts. Users can also use a full suite of drawing tools to mark ideas on their charts and save them.

There are some applications and websites that have indicators that can do some forms of this feature. They usually are weak in performance and do not correctly identify market patterns on a consistent basis. Most people end up ignoring them because they can't be relied upon. Pinnacle will use AI to search and find market patterns and fractals and then provide instructions and predictions for users to plan their incoming trades. Many exchanges have terrible charting features. Pinnacle will allow users to utilize our incredible charts to track their trades on any exchange.

- Pinnacle proprietary trading strategy signals (80%+ accuracy) with programmable execution for any exchange and any market. Pinnacle will allow users to include proprietary trading strategies developed by Roman over the course of 30 years. They are based on time and price action and have a very high rate of accuracy. Over the years, many users have told me that these systems seem like magic. I have posted basic time movement predictions for BTC as a demonstration on my twitter feed for the past 3.25 years. These systems will be available for in the Traders Market for monthly subscriptions.

No one has these systems. I developed them over the past 30 years and they are proprietary. I have shared aspects of them with my Whale Watchers trading group, but the public has not had access to them until now.

- Encrypted group messaging and monetized communications feature for professionals to offer trade recommendation subscriptions (trading strategies/tips, group based training, etc.). Users can set up private chat rooms to share their ideas with other traders. Pros can offer subscription based services using this module, and receive payment in BRIL. Messages can include charts and drawings to illustrate their trading recommendations. Pros can set up automated messages to be sent to their subscribers, or can create private subscription based chat rooms for their members. There will also be public chat rooms for those that want a lively discussion while trading the markets.

There are other sites that include public and private chat rooms. There are very few competing services that allow users to sell their advice or membership through a simple interface.

- Specialized Pinnacle automated trading systems geared toward 1:1 trading of crypto and stocks with exceptionally low risk and consistently high rates of return. This is an easy one to understand. 1:1 trading is the most safe way to consistently make profit in the markets. It may not make a large return as when using leverage, but traders who prefer to reduce stress can use this module and relax, knowing that they are making consistent profit. Users can choose their preferred markets, set trading parameters, and turn on this module to enjoy low stress trading every day. We think different people excel in different trading environments. If a person is not suited to the stress/pressure and fast decision making in forex, then

1:1 trading would be perfect. Especially for people who don't have a lot of time to trade.

Few sites and applications have this specific service. Some can be set to follow specific parameters, but that can take a lot of time, and most users prefer to get started right away. Pinnacle allows for users to get started within minutes and capitalize on markets movements in the safest way possible.

- **Portfolio Investment Management Suite to track your holdings and actively help you build them for the short and long term.** Users will be able to enter specific goals for near term or even retirement and this module will create a investment plan to make those goals a reality. This will be especially powerful when applied to crypto markets. We will be employing a specialized AI that can predict future market performance, track past behavior, and automatically execute trades within parameters set by the user.

No other crypto sites offer this feature. Some non-crypto sites offer these services, but they do not include crypto, and most of them require that you meet and discuss your needs with a planner. Pinnacle will do all of this for you.

- **Traders Market for users to buy and sell their own tools, indicators, bots, subscriptions, and private group memberships.** Users will have access to a market where they can purchase any number of trading tools and subscriptions that will increase their trading performance. Users can use the strategy and bot builder module to create their own tools and then sell them to other users. Pros can offer their subscription trading recommendations and private group memberships as well. We will continue to expand the store to allow

for users to sell accounting services, retirement planning, and even tax preparation.

Some sites have similar markets to purchase tools and indicators. We will strive to make our Traders Market simple and easy to use for both buyers and sellers. It will be a user-friendly experience with full descriptions of services/tools offered, and instructions for use once a purchase is made.

**Why is BRILLIANCE (BRIL) worth purchasing and what can we expect to see on trading exchanges?**

**Brilliance** (BRIL) is an Stellar based token that will perform a multitude of utility functions within the Pinnacle Investment Platform. BRIL will be the backbone of Pinnacle. Brilliance has quick 3.5 second block times so that users will experience blazing fast execution for trades and arbitrage. Brilliance will be the token that acts as a high speed vehicle to initiate and complete core transactions within the Pinnacle platform. All major features within the Pinnacle platform will require that users hold a balance of BRIL to meet requirements for transactions, fees, commissions, bonuses, subscriptions, and purchase of other users services/tools in the Pinnacle Traders Market.

The tokens will facilitate key trading functions between exchanges and the Pinnacle platform when executing trades and investing between various coins and tokens. They will also be a payment for “follow/copy” trading commissions, subscription service fees, transfer fees, trading bonuses (for pro traders), and tips.

After launch, Pinnacle users may purchase or sell the Brilliance utility tokens from any major crypto trading exchange. The requirement for BRIL

tokens to be held and used for Pinnacle services will ensure a consistent increase in value and price of these tokens. We will constantly be working to expand Pinnacle and acquire accounts with major banks and trading firms to further boost BRIL value on a consistent basis. BRIL has a huge potential for the public to accumulate and hold into the future.
