Brilliance is a Stellar based token that will be used to enable multiple functions within Pinnacle, a full featured multi-exchange investment application with true trading automation and complete account management functions that will **connect all other major exchanges and brokerages into a single access point for the first time in history.**

Overview

Cash is going away. It's a statement that many would have thought impossible 10 years ago. Then Bitcoin was created in 2009. At first, the public thought it was a phase. Slowly over the next few years Bitcoin and altcoins (cryptocurrency) developed and grew in popularity and function. Now, 8 years later, it is clear that crypto-currency is more than a phase. In fact many experts believe that crypto will supplant other forms of exchange within the next two decades.

We all know that. That is why we are here. We all want to be a part of this incredible technology, for what it promises us individually and for the world. The most basic expression of our interest in this new form of monetary exchange is to own these coins/tokens and participate in their growth as a tradable digital commodity. Millions of people are learning about Bitcoin, Ethereum, Stellar Lumens, and other altcoins every day. Those individuals are joining the millions of us who are already actively trading these currencies.

The entire crypto community is involved with trading in one form or another, and there are many different options to choose when trading open markets. Many investors use brokerages with staff who make the trading decisions for their clients. Most crypto people use 3rd party charting websites/apps

and individual exchanges. Huge numbers of people rely on advice from trading professionals on twitter and other sites to decide how they should invest.

There are an endless number of special advice, charts, tools, and tricks a trader can use to become successful. But which tools should you use? Are there any strategies that every trader should use to be successful? Which people should you listen to? Who has the best exchange with fastest execution? Should you hold for the long term, or exit now in profit? Who's trades should you "follow"? What kind of real track record does the trader have and can he be trusted to stay consistent? What should you do about long term investment?

Whether you are a pro or just getting started, there are so many options available to the modern trader that it can become overwhelming. If someone could come up with a single platform to answer all of those questions and provide the means to apply the best of that information to your trades in a consistent and successful manner, it would be the pinnacle of brilliance.

Enter Pinnacle and Brilliance.

Pinnacle is the trading and investment platform that will become your primary point of access to the growing world of crypto, CFD, stocks, futures, and options investment. Pinnacle will be a full featured investment multiplex with truly automated trading features for beginners, and the very best trading tools for professionals. This platform will revolutionize trading cryptocurrency and world markets.

Pinnacle services include:

Access to every major trading exchange and ability to execute all trading functions within the platform (PC, Mac, Android and iOS)
Fully automated arbitrage trading within and **between all** exchanges

Copy/follow professional traders as they place trades across multiple platforms simultaneously (with multi-month performance based qualification system and automated commissions)

YamaCat Trading Course For Beginners to learn all skills necessary to be a competent trader in real time

Extensive charting app for all exchanges with advanced AI trade pattern recognition/identification, automated trade execution, and trade setup alerts for professionals

Pinnacle proprietary trading strategy signals (80%+ accuracy) with programmable execution for any exchange and any market

Encrypted group messaging and monetized communications feature for professionals to offer trade recommendation subscriptions (trading strategies/tips, group based training, etc.)

Specialized Pinnacle automated trading systems geared toward 1:1 trading of crypto and stocks with exceptionally low risk and consistently high rates of return

Portfolio Investment Management Suite to track your holdings and help you build them for the short and long term

Traders Market for users to buy and sell their own tools, indicators, bots, subscriptions, and private group memberships

We think different people excel in different trading environments. If a person is not suited to the stress/pressure and fast decision making in forex, then 1:1 trading would be perfect. Especially for people who don't have a lot of time to trade.

Every single person can become a successful trader as long as they choose the trading style that fits their strengths and weaknesses.

Brilliance (BRIL) is a Stellar based token that will perform a multitude of utility functions within the Pinnacle Investment Platform. BRIL will be the backbone of Pinnacle. Brilliance has quick 3.5 second block times so that users will experience blazing fast execution for trades and arbitrage. Brilliance will be the token that acts as a high speed vehicle to initiate and complete core transactions within the Pinnacle platform.

All major features within the Pinnacle platform will require that users hold a balance of BRIL to meet requirements for transactions, fees, commissions, bonuses, subscriptions, and purchase of other users services in the Pinnacle Traders Market.

The tokens will facilitate key trading functions between exchanges and the Pinnacle platform when executing trades and investing between various coins and tokens. They will also be a payment for “follow/copy” trading commissions, subscription service fees, transfer fees, trading bonuses (for pro traders), and tips.

After launch, Pinnacle users may purchase or sell the Brilliance utility tokens from any major crypto trading exchange. The requirement for BRIL tokens to be held and used for Pinnacle services will ensure a consistent increase in value and price of these tokens. We will constantly be working to expand Pinnacle and acquire accounts with major banks and trading firms to further boost BRIL value on a consistent basis.

Why we need a decentralized mechanism and a token

You might have noticed that many algorithmic trading platforms that are funded through Ethereum ICOs don't really need tokens at all, and merely run off centralized databases, recording little if any meaningful information on blockchains.

The transaction speed and low computation cost of Stellar means that it is possible to create a truly decentralized copy trading platform. This means that trading and copy trading records achieved on Pinnacle will not be falsifiable, even by us! It will certainly not be possible for users to manipulate them by getting friends to upvote copy trading performance, or any similar method. The accuracy (or otherwise) of trading signals given by traders on Pinnacle will be clear for all to see.

A token is necessary in order to play certain computational functions within the platform which require consensus, and between exchanges which requires very high transaction speeds. Pinnacle will be a multi-exchange, decentralised trading and copy trading platform – the first of its kind – and certain information which is necessary to truly verify trading records and copy trading records in an unfalsifiable manner needs to be transmitted on the Stellar blockchain. This will give us a unique advantage over centralised platforms like 1broker, eToro, and Tradingview, and over Ethereum based platforms that contain approximations of certain of our features.

Furthermore, it is necessary to use Stellar rather than Ethereum in order to do this. Ethereum based trading platforms are often not truly decentralised due to practical concerns of computational cost and speed. They could really be done without tokens a lot of the time. But Pinnacle can properly utilise a token, as the transaction cost of Stellar mean that it can be used for the real purposes for which blockchains were designed. Ethereum currently has an issue with computational cost, as well as inherent issues in the solidity language that led to the recent disasters such as Parity.

The way we will achieve this is no different to the way it would be achieved in any Stellar network architecture and doesn't require elaboration if you are familiar with how Stellar (or blockchains in general for that matter) work and interact with centralised components in systems. The only real novelty is how we achieve consensus for "single instance events" such as trade placement, in order to confirm trading records - this is not obvious but the solution might become clear to blockchain architects with some reflection and thinking outside the box. We cannot expound on this in the whitepaper as we believe our solution is patentable.

The token is also necessary in order to transcend boundaries between areas of differing financial regulation, which is why a project like this has not been possible prior to blockchain, and why what we have called the "problem of exchange separation" in some of the articles on the site, which has existed since the beginnings of trading 6000 years ago in

Mesopotamia, was not resolved by the rise of computerised trading that began the Nasdaq era. You need true decentralisation to do this, not just abstract mainframe style computation, and Pinnacle, via Stellar, will make this a reality. And you need Stellar rather than Ethereum for practical considerations of speed and cost.

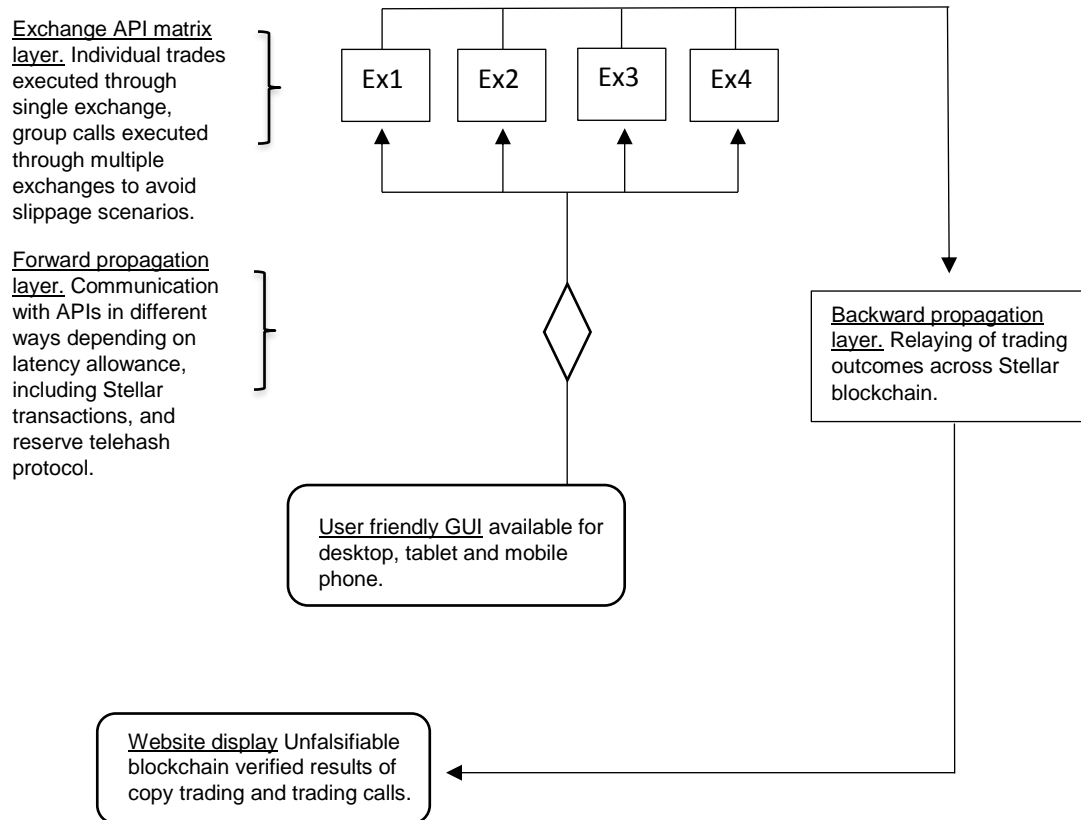

FIGURE 1: A high level architectural outline of one part of the proposed decentralized Stellar-based trading performance records transcription, within a hypothetical order filling environment catering for both single exchange and multi-exchange execution.

For many “ethereum based” platforms the token is not really necessary, except as a fundraising mechanism to get around SEC legislation, but with Pinnacle it is indispensable and is the very backbone of what we will do. Brilliance is one of the best examples of a true utility token that exists.

So a token certainly is necessary. Brilliance as a modified Stellar based token is set to provide revolutionary and unique trading platform functions that Ethereum tokens cannot achieve for practical reasons. We have intentionally tried to keep the rest of the whitepaper focussed on uses of the platform rather than technical information for now, as this is what most people will get most benefit from reading, and because this is necessary to preserve patentable rights. After consideration, we might give more technical detail in a later edition.

ICO Legal Considerations

It is very common to hear members of the crypto community shout that ICOs are illegal. They are mistaken. There is no law against ICOs. If an ICO is for a utility token, and has passed the Howey test, anyone can participate. Brilliance passes the Howey test and is a true utility token. The SEC has given advice about ICOs, but no laws have been passed as of this writing.

I repeat, no laws governing ICOs have been passed. SEC rules exist for “securities” and some tokens can be categorized as such, but that is what the Howey test is used for.. to assess if the token is a utility or security. For a security token, the US requires that only “accredited” investors be allowed to participate. Brilliance is not a security, and we completely pass the Howey test. In addition, to simplify matters, and because our development team has members in multiple countries, we have legally incorporated in Belize. We are not a US based ICO. To dispel further misinformation, SEC laws do not apply to non US citizens or ICOs.

There is nothing to prevent citizens of any country from participating in our ICO.

We have taken all necessary steps to ensure that our project is completely legal. There are multiple links in the reference section of this white paper that go over specifics about ICOs.

PINNACLE FEATURES IN DETAIL

API access to all major exchanges

Pinnacle will allow users to add all major trading exchanges to their dashboard and trade each one with full functionality. This will include Bittrex, Poloniex, Cryptopia, Bitfinex, Kraken, 1Broker, Metatrader, TD Ameritrade and many other forex, commodities, and stock trading exchanges.

Once the platform is nearing completion, we will communicate with our contacts in major trading websites and banks to negotiate inclusion of Pinnacle into the client services. Barclays Bank has already expressed interest in adding Pinnacle to their services. Stellar based tokens are quickly becoming the blockchain of choice for fintech, and Brilliance will be leading the pack in platform based utility tokens. Our platform is going to revolutionize trading for the masses and make consistent profit within the reach of all traders, not just the top tier.

You can have multiple trades active with multiple exchanges at once and manage them with ease. Pinnacle will have an Exchange control page which will display all of your active trades and allow changes and orders on the fly. We will also include specialized trading orders (such as trailing stop loss) that may not be readily available on some exchanges but can be executed by Pinnacle. Many exchanges don't even have trailing stop loss orders. Pinnacle will solve that problem and allow for "uniform" trading options between all exchanges.

Crypto exchanges set for inclusion:

Poloniex
Bittrex
Bitfinex
Kraken
Cryptopia

Forex/Commodities/Stock/Futures exchanges set for inclusion:

1Broker
Forex.com
FXCM
SimpleFX
Tradersway
Metatrader
TD Ameritrade

We will add support for new exchanges based on user interest and trade volume on an on-going basis.

Shapeshift.io/changelly.com support

We chose to include support for shapeshift/changelly to provide a fast and simple way to convert your coins for payment, subscriptions, tips, or anything else. The shapeshift module will work with our own wallet and BRIL to allow conversion between most major cryptocurrencies. In later phases we will contact Coinbase, Bitpay, PayPal, and other companies about "crypto - fiat - bank account" choices. We want to give you the best options to manage all of your funds through Pinnacle.

“CopyCat” trade following system

Millions of users have been looking for the best trade copying service or site that allows trading in crypto, forex, CFDs, stocks, bonds, futures, and options. Few options are currently available, and even fewer allow copying crypto trades. We know how important these features are to users, so Pinnacle will have a complete module set up for copy/follow trading. BRIL must be held to pay commissions to the professional traders a user chooses to follow.

Traders who share their trades will get commissions paid in BRIL on a sliding scale based on the trader’s performance rating. Exceptional traders will be given bonuses for large wins and increased commissions based on performance and number of followers. We chose to build the copy/follow

system into Pinnacle with all exchanges accessible to the pro traders and the users who follow them.

In addition to that, Pinnacle will allow users to customize how they follow traders. Risk levels, specific markets, specific exchanges, and even time of day. If a user doesn't want to be in "follow trades" during big news data releases, they can select to stay out such trades. For example, if a user doesn't want to be in silver trades, Pinnacle will exclude silver trades from the copy/follow execution.

Pinnacle will include a trading qualification system for pros who would like to be followed by users. To qualify as "Brilliance-Certified", Each pro must trade for 3 months and show consistent profit with limited drawdown. If the trader is incapable of maintaining consistently good performance, they will not qualify as a certified trader. Non-certified traders can still be followed by users and get commissions, but they will not qualify for certified trader bonuses and additional commissions until they successfully pass a qualification test. Certified traders may adjust their commission levels within set parameters. Better traders will be able to charge a higher fee if they choose to do so.

In the event that a certified trader falls into a pattern of bad trading performance, Pinnacle will automatically pull qualification from their account. We want users to get consistent profits from our platform, so it will be built to maintain quality control over all aspects of its trading features.

Users must have an account at each exchange and they will need to have an adequate coin/fiat balance at each to consistently copy trades. If the user does not have an adequate balance to match their chosen trade size at a particular exchange, that individual trade will not execute. For users who want to stick with a specific exchange for all of their copy/follow trades, there will be a setting that can be chosen to execute all compatible trades on that specific exchange. In the event that the exchange does not support an individual trade, no trade will be executed.

We will be offering some incredible perks to the community when the ICO begins. Make sure to check our webpage often for news and articles.

“YamaCat” Trading Course For Beginners

There will be a special module included within Pinnacle that provides a complete step by step trading course in real time. Yama Cat will guide the trader through basic skills and onward to more complicated trading strategies. All of this will be done by using small trades in real time market conditions, so that the beginner can learn while actively making trades. The best way to learn something is by practical application. Yama Cat Trading Course will turn beginners into competent traders with the skills to earn consistent profits every day.

After a user feels that they have learned everything they need from the YamaCat step by step instructional course, they can choose to have YamaCat assist them with real time analysis of their active trades. Yama will alert traders to whether a trade they are planning is good or bad. This feature will be a great help for all traders who want a second opinion before they place a trade.

Advanced Charting and Strategies

The features listed above leads us to the next module within Pinnacle which is advanced charting. Pinnacle will pull price data from each exchange you connect with and apply our proprietary algorithms to the charts. Pinnacle will identify major trading patterns in a clear and easy to understand manner. All trading patterns will be covered. From pennants, to Gartley, to reversals, and even candlestick chart patterns. It is your choice to use one or all of them. The charts will find those patterns in real time and identify them for you on the charts.

In addition, for a subscription fee, you can add-on Whale Watchers proprietary trading strategies. These include WW EMA, PSF (Perpetual Sequence Forecasting), and ULK (Unified Lunar Key). With these

strategies, a trader can be confident to pick the correct direction and timing for their trade with an accuracy greater than 80%.

Check “knightlife999” twitterfeed for past performance BTC direction/time calls over the last 3 years. That is a simplified example for public demonstration purposes, but it gives an idea of how accurate our systems can be. Pinnacle will include auto-trade functions that can be set to identify and execute trades using our strategies. Risk level and margin preferences are fully customizable and exits are also automated with multiple ways to lock in profit.

Users will have the option of creating their own auto-trading strategies as well. Pinnacle will include an easy to use trading setup and simple drag and drop rule system that can execute as many trades as you like between each exchange using our strategies or your own. User created strategies can be sold on the “Pinnacle Trader’s Market” for BRIL.

Low Risk, High Yield Trading Strategies

Pinnacle will have a specialized 1:1 no margin low risk trading system for use with crypto, stocks, and some commodities. The drawdown will be at nearly zero and win rate exceptionally high. If you've been looking to reduce stress and sit back, this is the module for you.

Floor traders are already asking for this module in advance so that they can go on vacation and let Pinnacle do all of the work. Without margin being used, your account cannot be margin called, and the module will only trade markets with 1:1 trading options. Obviously, some exchanges charge to hold overnight, but if you purchase BTC or stocks, you can hold as long as you like.

This module will utilize the proprietary WW trading strategies with over 80% win rate to build your account on a consistent basis. You can choose to take the signals and execute trades on your own, or turn on the automation service and let Pinnacle do it for you.

Trading Strategy/Indicator Builder

Pinnacle users will be able to create their own tools, bots, and strategies for use with their accounts. This module will be simple to use and feature drag and drop rules to create your strategies. Users will also be able to create chart indicators and tools with drag and drop rules and drawing tools. Users may sell their creations in the Traders Market for BRIL.

Encrypted Communication Services

Pinnacle will include a multifaceted encrypted communication system. Groups can create private chat rooms to team up with other traders and plan strategies. Trading instructors can set up subscription based rooms for their paid classes and choose to be paid in BRIL.

Users who offer trading advisory services will be able to charge subscriptions and send out their calls to all of their subscribers or specific individuals. Users can include charts from the Pinnacle advanced charting module to add depth to their recommendations. If a trader prefers to give public tips for free, there will be a non-encrypted public board for that purpose. Users can also add chart drawings to their public calls. Subscription services will also have a ranking system and “Brilliance Certified” qualification based on performance.

In later development phases, pro traders can choose to send complete automated trade setups to subscribers. When received the subscriber will have the option to activate the trading recommendation and the automated trading system will set it up exactly as noted by the pro.

Fully Automated Arbitrage Trading

Many apps have promised to offer an arbitrage trading bot, but have never really come through with an effective product.

Pinnacle will include an automated arbitrage trading module that will analyze all exchanges within your account profile and execute trades within set parameters. To be clear, Pinnacle will allow users to make arbitrage trades on single exchanges and multiple exchanges at once. We all know

the basic arbitrage trade takes place on one exchange between two markets. Pinnacle will provide that function, but it will also perform automated arbitrage between multiple exchanges with multiple markets. (Example.. LTC temporarily sells for a lower price on Poloniex than Bittrex. Pinnacle sets up the arbitrage trade and automatically makes all necessary transfers and trade executions to complete the transaction.) This is a complicated feature, but it is something that I have always wanted to see in a trading platform. Users can also select to only be alerted when certain parameters are met.

When trading arbitrage, speed of execution is the key to a successful transaction. If your coin takes 15-30 minutes to confirm, the opportunity will likely pass you by. There will be three choices available to users which can ensure a quick transfer of funds to process the trade.

The simple method: Pinnacle will analyze and execute arbitrage trades on individual exchanges. The platform will convert and swap coins/tokens automatically to facilitate the arbitrage trade. Pinnacle will be able to draw a solid return from these trades.

The advanced method: Our team will negotiate an agreement with participating exchanges to extend credit in multiple coins with your BRIL account balance set as collateral. A high speed transaction will take place between Pinnacle, Brilliance, and the exchange to complete a full arbitrage trade. The speed of BRIL transfers and confirmation (average 3.5 seconds) is what makes this transaction work so quickly.

The basic method: Standard arbitrage process where your chosen coins are automatically purchased, sent to the other exchange, and sold at the higher price. Afterward, Pinnacle will send the coins to the wallet of your choice. This process will be completely automated by Pinnacle. Pinnacle will choose the coin with quickest transfer speed to send between exchanges.

There will be a difference in arbitrage trade execution speed depending on the type of trade you are making. When an arbitrage trade is executed on a single exchange, the trade will take place in seconds. When the arbitrage trade is executed between two separate exchanges the speed of transfer and completion will depend on the coin chosen and speed of the exchange server. Pinnacle will execute the latter as fast as is currently possible. We will continue to work on methods to speed up the exchange to exchange transfer system moving forward. BRIL will be used to cover small arbitrage fees.

There are new exchanges in the works that will not charge fees, and we will be in contact with them for inclusion with our platform. Zero fees makes arbitrage opportunities more profitable. Our platform will be the most profitable way to trade arbitrage in the world and we will continue our work to make the process as fast as possible.

Pinnacle “Traders Market”

Pinnacle users will have access to a traders market where they can sell services and tools to each other for BRIL. Users can offer their own bots, tools, indicators, trading call subscriptions, private group memberships and other services. Pinnacle will have a trading strategy builder that users can use to create their own automated bots and strategies to be used on their own accounts or sold in the Traders Market. We will expand features within the Traders Market to include retirement packages, accounting services, and tax preparation to name a few. All sales within the Traders Market will be paid with BRIL.

Portfolio Investment Management Suite

Pinnacle will include a full suite of investment management tools to track where you are and where you would like to go. In the early stages it will actively monitor your holdings and their values, providing graphs and studies to analyze historic price data and project potential future value. In later development phases, this module will be expanded and automated to

find and invest in the best opportunities across the spectrum of markets using a proprietary AI system.

Whether it be stocks, currency, crypto, indices, options, or gold, Pinnacle will be capable of diversifying your portfolio and managing your investment capital for the near or long term. Users can plug in how they want their money to grow, risk profile, and time scale for investment or retirement. Pinnacle will analyze that data, choose the best options within your set parameters, and begin investing for you with zero stress and no endless hours sitting in front of a monitor.

Go out and enjoy your life and do something with your family or friends. Pinnacle will be working hard to make you consistent profits.

Future Modules:

Future plans include a Twitter public bias analysis app and trade execution, an ICO investment module to monitor upcoming opportunities and facilitate purchases, app creator to design and add your own trading apps to the platform (and market them to the Pinnacle/Brilliance community), expanded trading strategies, whale-call notification and newsfeed.

Pinnacle and Brilliance will be a revolutionary advancement in trading technology.

Supported Devices:

Pinnacle is a software application that will be available for PCs, Macs, and mobile phones.

Wallet Functionality

Pinnacle account wallets will be able to send, receive, and store any Stellar based standard token. Stellar has its own integrated exchange which can be used to buy or sell any Stellar based token including Brilliance.

ShapeShift.io / changelly.com integration will allow Pinnacle users to convert between tokens easily from their Pinnacle account. Along with Shapeshift.io and our list of supported exchanges, we will be adding API support for major BTC, LTC, and ETH online wallets.

EXTENDED OUTLOOK

ICO Details

The pre-ICO will begin on the 15th of January 2018 and will run for 15 days until the 30th of January 2018. One quarter of the total supply of BRIL will be available during the pre-ICO (minus private buys). Pre-ICO funds will be dedicated to marketing the main ICO. We are planning multiple methods of digital marketing and will make certain that the public is fully aware of this opportunity. Our ICO structure will perform an exchange of BRIL coins for your payment. Payments will be made in Ethereum. **Our pre-ICO has a special discount rate of 25% off for the entire period.** This presale is aimed to raise funds to advertise and market the main ICO.

Maximum for sale pre-ICO 6,747,500 BRIL.

Pre-ICO price \$0.75 USD = 1 BRIL

Minimum transaction amount \$300 USD

Pre-ICO sale period 01:00am GMT Jan 15 2018 to 01:00am GMT Jan 30 2018

Minimum pre-ICO goal: No minimum Pre-ICO

Pre-ICO Funds Main ICO

Pre-ICO funds will be used to buy services and ad spaces for Brilliance/Pinnacle Symbol BRIL

Maximum supply for sale ICO 26,990,000 BRIL

Payments will be made in ETH.

Price \$1.00 USD = 1 BRIL

Minimum transaction amount \$300 USD

ICO sale period 01:00am GMT Jan 31 2018 to 01:00am GMT Feb 25th 2018

Emission rate: No new coins will ever be created

Token Distribution

25% of all tokens are available for purchase during the pre-ICO sales. 75% plus all unsold tokens from the pre-ICO will be available during the ICO sale. Zero tokens will be distributed to the Pinnacle/Brilliance team. No tokens are offered for bounties as all bounty payouts are in BTC. If the team requires Brilliance tokens, they will buy them off of crypto trading exchanges. Since we will need to do this quite often, there will be a steady demand for BRIL from exchanges. Brilliance is a token made by traders, for traders.

Unsold Tokens

Following fundraising unsold tokens will be permanently (and provably) locked down (Stellar equivalent of burning). No tokens will be kept for devs.

Funds Allocation

All raised funds from the ICO will be liquidated slowly to ensure no market disruptions.

Development 70%

Security Audits 10%

Advertising 10%

Legal 10%

Listing on Exchanges

Brilliance/Pinnacle has prepared necessary documents to be listed on crypto exchanges.

Brilliance fits within the guidelines for inclusion on all crypto exchanges. The plan is to be listed on at least three exchanges after the the ICO period is complete.

Roadmap and Development Plan

Our roadmap plan is set to bring users the most features in the shortest amount of time. We want all of our users to begin making money and enjoying their lives as quickly as possible. With that in mind, we will be working tirelessly to complete development of the core features in a logical and expedient manner.

Q1 2018 – We plan to release certain of our trading bots for Brilliance holders use and to open our store as soon as we are listed on exchanges (see website).

Q2 2018 - Full API exchange access connecting multiple forex, stock and crypto platforms into Pinnacle for single access point trade execution and monitoring. Shapeshift.io and changelly.com support. Encrypted communications for trading groups/calls.

Q3 2018 - CopyCat trade following and copy trading system. Level 2 automation tools. Advanced charting tools and trading signals, PSF and ULK trading signal service begins.

Q4 2018 - Portfolio management service, with retirement planning packages and automated execution. Blockchain based, unfalsifiable verification of trading records.

Q1 2019 - Integration of initial physical commodities anchors. Twitter analysis, ICO investor, App creator, Whale-alert and newsfeeds.

Q2 2019 and beyond - Continued integration of increasingly varied physical commodities anchors. Continued integration of increasing numbers of exchanges and brokerages into Pinnacle multiplex. On-going upgrades to Pinnacle trading features and R&D for further features.

Disclaimer

Risk of abandonment / lack of success and risk of dissolution of Pinnacle Brilliance Systems Inc. We will make every effort to ensure that the Pinnacle platform is completed and available to the public. You understand and accept that the creation of the Project Tokens and the development of the Project may be abandoned for a number of reasons, including lack of interest from the public, lack of funding, lack of commercial success or prospects (e.g. caused by competing projects).

You therefore understand and accept that there is no assurance that, even if the Project is partially or fully developed and launched, you will receive any benefits through the project tokens. In addition, you understand and accept that following abandonment of the Project it may no longer be viable for Pinnacle Brilliance Systems Inc. to operate and that it therefore may dissolve voluntarily.
